

DAISY DATA  
RECOVERY

Business Continuity

# ALIGN LEVELS OF PROTECTION AND RECOVERY TO YOUR BUSINESS REQUIREMENTS

With the explosive growth in data and the adoption of “always-on” 24/7 services over the last few years, organisations need robust, flexible, and trusted recovery options to ensure their business can continue in today’s fast paced world.

It’s now more important than ever to be able to deal with any threat effectively. Whether it’s an increasingly sophisticated cyber attack, downtime due to planned maintenance, power outage or other external disruption from flooding to terrorism or civil unrest.

Daisy is one of very few service providers with the business recovery expertise to protect your data securely, compliantly and cost-effectively whether it resides on-premise, in a virtual environment, in a private or public cloud or any combination of these.

Data can be recovered to a customer or partner location, a Daisy UK-based recovery centre, public cloud in any combination.

Because we store customer data in our own data centres that offer air-gapped and immutable storage, we can provide clean recovery environments for systems, servers and data, as well as people with Work Area Recovery, that all are immune from cyber and other threats.

## What does Daisy Data Recovery deliver?

Daisy’s Data Recovery service provides full recovery capabilities for your systems, applications and data on physical equipment, virtual platforms and hybrid and public cloud in any combination, with Daisy offering 24/7 assisted and fully managed recoveries.

- Supported virtual platforms include VMware, Hyper-V
- Supported physical platforms include Intel, AMD, IBM i & p series, SUN, HP and Alpha
- Supported operating systems include Windows, Linux, HP/UX, Solaris, IBM and Alpha

## DAISY DATA RECOVERY

### Why Daisy Data Recovery?

- Easy to deploy, cost-effective and compliant, you have the peace of mind that your business-critical data is protected by the UK's leading recovery specialist
- Daisy can simplify all of your data protection by including replication and backup services and blending live and archive technologies to deliver cost and efficiency savings.
- We are unique in our technology-agnostic approach, partnering closely with many leading vendors, including Veeam, Acronis, Zerto, NetApp and Carbonite to make sure the solution we deliver is the right one, for you
- Our services can fully integrate with our Business Continuity Management, Work Area Recovery and traditional IT Disaster Recovery services.
- Our services can be delivered flexibly via the cloud, physically to your site or to one of our industry-leading Business Continuity Centres
- With service levels to suit every organisation, we have everything you need for data protection and recovery, regardless of your size and complexity.
- We've consolidated our portfolio so that we are able to deliver a single solution that is simple to deploy, resilient, recoverable, compliant and cost-effective

### Why Daisy for Data Recovery?

In today's always-on, fast-paced world, hundreds of UK businesses trust Daisy to keep them going when things go wrong.

Like them, you can benefit from our data protection and recovery services to keep your staff and customers connected to systems and data in the event of a business interruption.

- We recover on average one customer every week, year on year
- We have multi-award-winning people, services and physical infrastructure
- We protect more than 2.1 Petabytes of critical customer data
- We have more than 7500 pre-configured work area recovery seats ready and waiting in the UK
