DAISY DATA REPLICATION

Business Continuity

# REAL-TIME RECOVERY OF YOUR BUSINESS' CRITICAL SYSTEMS

In today's 'always on' world, organisations are relying on systems to be continuously available in order to meet customer demands and remain competitive.

Daisy understands that businesses need the confidence that these critical systems will always be running and can recover in real-time from any disruptions.

Our data replication service protects your on-premise systems, applications, and data, as well as your hybrid and public cloud ones. Replicated data is stored in Daisy's dedicated data protection cloud, located in its own UK-based data centres, as well as locally if required.

Offering real-time recovery of critical systems, our replication service is the ideal solution to protect your 'always on' services.

By supporting multiple recovery points, we enable you to recover from any disruption, be it a simple hardware failure or a more complex cyber event.

**What does Daisy Data Replication deliver?**

Daisy's data replication service provides complete real-time replication capabilities for your systems, applications and data on physical equipment, virtual platforms and hybrid and public cloud.

Hardened repositories and off-site, air- gapped storage combined with a simple, single pane of glass management, with integral reporting, logging and monitoring provides peace of mind against major threats.

With a choice of support packages, from self-managed protection to a fully managed service, where Daisy takes care of everything. The service is flexible for your requirements, with a simple per GB of stored data cost.

# DAISY DATA REPLICATION

## Why Daisy Data Replication?

Data replication is part of our integrated data protection portfolio, offering backup, replication and recovery.

### Our solutions deliver:

- Choice of single or multiple copies of your data held off-site in the UK

- Choice of backup, replication and archiving tailored to your business

- Physical and virtual recovery options back to you or any of our UK recovery centres

- Flexible industry-compliant data retention policies

- End-to-end and data encryption using your keys

- Automated email alerting and reporting

- Optional co-managed and fully managed service

- Optional IT and people recovery services with inclusive recovery assistance

- Optional business continuity management

## Why Daisy for Data Replication?

- We are the UK's #1 independent provider of secure IT, communications, and cloud

- We have a dedicated team delivering availability solutions integrated across business continuity and cloud, and we are committed to helping our customers achieve organisational resilience

- We have multi-award-winning people, services and physical infrastructure

- We are unique in our technology-agnostic approach, partnering closely with many leading vendors, including Zerto, NetApp and Carbonite to make sure the solution we deliver is the right one for you

## Have you thought about…?

**Data Backup** - for when you need to protect all your environment, provide long term retention, and comply with government regulations.

**Data Recovery** - that is optimised to your business requirements, either standalone or seamlessly integrated with Daisy's data protection services.

**Security solutions** - that combined with Daisy's data protection services ensures that your business is protected as well as your data.

**Shadow-Planner** - helps you plan, test, and manage incidents that affect your normal operations.
