

Executive Benefits of Cisco Meraki

# SD-WAN

More users. More applications. More devices.  
**Same network.**

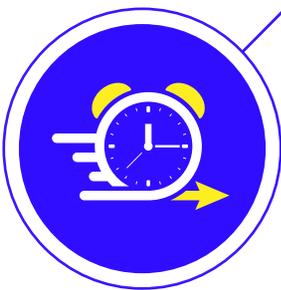

**Software-defined WAN (SD-WAN)** allows businesses to harness and take control of their network.

From improved agility to significant cost savings, here are four BIG reasons why SD-WAN makes sense.

Gold Certified  
Solution Partner

## AGILE

**Evolve your network to meet the changes and growth your business strategy demands**

- Be carrier-independent by overlaying services on top of new or existing connections, accelerating delivery time and evolving your network in line with business needs
- Real-time modification means urgent changes and updates can be done instantly
- Define importance, routing and security for each application's traffic flow to ensure business priorities are met

## COST-EFFECTIVE

**Achieve more with less - Get MPLS benefits with simple internet access**

- Avoid double charges for internet break-out, use efficient and cost-effective local access
- Improve employee productivity with zero-touch provisioning (ZTP), centralised management and better app visibility
- Take advantage of the new ultrafast broadband to increase capacity at remote sites achieving flexibility without breaking the bank

## SECURE

**Increase resilience with a zero-risk approach as security is embedded by default**

- Central control portal, change traceability and end-to-end encryption means greater security, compliance and audit control
- Ability to interconnect multiple WAN links (including mobile access) and define how the failover will intervene, achieving a higher level of business continuity
- WAN segmentation isolates critical enterprise assets, guest WiFi and business partner access for peace of mind

## ECO-FRIENDLY

**Versatile devices to combine multiple functions and enable you to consolidate infrastructures as a further step towards net zero targets**

- Reduced infrastructure requirements means reduced reliance on server rooms and cooling needs
- Cut down on carbon footprint thanks to simplified installation process with ZTP which makes site visits redundant
